DIRTT

THE BEST OF BOTH WORLDS: DIRTT MILLWORK

Why choose between the design freedom of custom and the certainty of manufacturing?

Real estate constraints. Functional requirements. Personal taste. All these make custom millwork by a skilled carpenter an excellent choice. But what about the price certainty and predictable schedule of pre-manufactured millwork?

Both have their downsides too. On-site construction is messy, wastes materials and can be impeded by other trades. And most pre-manufactured millwork is only available in standard sizes and configurations.

DIRTT Millwork brings the best of these worlds together. DIRTT does it on a 21-day lead time after project approval. With a completely unique design.

1. ENHANCE YOUR DESIGN

Take back the freedom and time to design. DIRTT's software contains a powerful millwork design, price and build tool. It gives the design team control over the DIRTT facilities while keeping you fully informed of the effect on your budget.

- Spend time being creative when you eliminate hours spent on revisions and shop drawings
- Create the exact functionality and design you want
- Explore your space in virtual reality and share 3D flythroughs of the design with the decision-making team
- Clients can deliver approvals faster and with confidence
- Revisions are done on the spot. All information is automatically updated

2. CUSTOM RESULTS WITHOUT CUSTOM PRICING

Like all components in DIRTT's software, the Millwork manufacturing and installation data is ingrained in the 3D experience. Every millimeter is accounted for as you design the perfect credenza to fit your needs and your space.

Change the size, dimensions, configurations and finishes of your millwork without paying extra for customization or complexity. Want to shrink the cabinet size by ¼ inch? No problem. That will cost you less because you only pay for materials you use. Integrate technology, passthroughs, medical equipment, custom hardware and more.

You're not stuck designing around the limitations of an off-the-shelf product. And you're not paying for extra raw materials cut to fit on the job-site.

3. SPEED GIVES YOU AN ACE UP YOUR SLEEVE

DIRTT's software speeds things up by producing instant quotes and updates. It gives you confidence to make decisions faster by showing you exactly what you'll get. It also means faster production times.

We build your millwork in just 21 days and ship it promptly to you. It arrives to site fully assembled and ready to install. It integrates seamlessly, making installation on site fast, clean and efficient.

Precision and speed means you and your teams can make important purchasing decisions about things like integrated technology at the last possible minute without hurting the move-in date.

4. KNOW WHAT YOU'RE GETTING

View your millwork in real-time, graphic 3D. Explore your space in virtual reality. Share a flythrough with the team. It's an interactive experience like playing a video game. And you'll sleep well knowing the price quoted is exactly what you're going to pay.

5. CONFIDENCE FOR THE FUTURE

No one wants to pay extra for what “might happen” in the future. But everyone likes to be prepared. With DIRTT Millwork, you respond to change without it costing a thing. Need to split up some cabinets into new areas? No problem.

Our vast finish options are always at the ready for you. Whether you want to build additional millwork with the same look. Or, maybe you want to change things for your next phase – we can do that too.

DIRTT Millwork uses high quality and durable materials including the most advanced hardware in the world today. Even in heavy-use areas, DIRTT millwork stands up to its 10-year warranty.
